# What are Price Audits

- **Price Audits are exactly what they sound like:** a specific listing of products and/or SKU numbers and the associated retail prices being displayed for consumer purchase as of the date of the audit. They allow companies to see a snap shot of how their present pricing compares with that of their identified competitors.
- **This data can then be used to make adjustments** to, or affirmations of, the company's current pricing structure, as well as develop pricing strategies, promotions and sales for upcoming quarters.
- **Due to the cost-effective nature of price audits,** these measurement tools are a key element of a corporate customer intelligence strategy. They are used heavily in retail environments, but also have utility in any industry in which there is a competitive environment.

**Makes employees aware of what is important in serving customers, using the competitor's background**
